BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

**As rescanning documents *will not* correct images,
please do not report the images to the
Image Problem Mailbox.**

TITLE : FUEL DETECTOR OF FUEL CELL

ABSTRACT : PURPOSE: To improve detection precision by providing a diaphragm wall at the liquid phase area of a fuel and anolyte supply system so that fuel vapor which permeates through the diaphragm wall is sent by a blower to a gas detector for detection.

CONSTITUTION: A diaphragm 14 is provided at the wall of an anolyte reservoir 12 in contact with an anolyte 13. The diaphragm 14 is surrounded by a detection box 16, wherein a blower 15 is installed in lower opening thereof and a gas detector 7 and a thermistor 8 used for compensating temperatures detected by the gas detector are installed in upper opening thereof and connected to a detection circuit 6. Fuel vapor which permeates through the diaphragm 14 is sent by the blower 15 to gas detector 7 and detected. Since fuel gas which permeates through the diaphragm 14 is immediately sent to the gas detector 7 by the blower 15, it can be detected with a high precision, coinciding with the fuel concentration in the anolyte 13. Also, because of intervention of the diaphragm 14, no sulfuric acid bleeds and a decline of reliability of the gas detector 7 due to corrosion is avoided.
